DIAMOND

PAPER TAPE DISPENSER

Paper tape is the environmentally friendly solution for closing boxes. After use, the packaging box can be recycled, including the adhesive tape. Due to the direct and strong adhesion, paper tape is also suitable for heavy packaging. Another major advantage of paper tape is that it cannot be removed without damaging the box, which has a preventive effect against theft.
Paper tape can be divided into two types: self-adhesive paper tape and gummed paper tape. Gummed paper tape only sticks after the adhesive layer is activated with water. A dispenser is therefore required for application.

Dispenser

The new paper tape dispenser DIAMOND is an innovative electric dispenser for gummed paper tape designed with customer in mind. The dispenser is highly sophisticated in design yet at the same time effective and practical to use with details like easy access to the water tank or tape with easy top opening. DIAMOND is reliable with CYKLOP technology, low noise and has an innovative remote control for the tape errogation. All corrosion-sensitive parts are polished or galvanized, which ensures a long lifespan and low maintenance.

With DIAMOND, large numbers of packages can be closed per day with WAT.

Options:

- Start with foot pedal
